ABOUT

Software Engineer with 2+ years of experience building scalable SaaS applications using React.js, Next.js, TypeScript, Node.js, Express.js, REST APIs, and modern web technologies. Experienced in developing responsive frontend applications, building backend APIs, integrating databases, and collaborating across the software development lifecycle. Passionate about AI-assisted development, performance optimization, and delivering high-quality software solutions.

SKILLS

- **Frontend:** React.js, Next.js, TypeScript, JavaScript, HTML5, CSS3, SCSS
- **State Management:** Redux, Redux Saga, Zustand, React Query, Context API
- **Backend & APIs:** REST API, Node JS and Express JS, GraphQL, Firebase, SQL, MongoDB, PostgreSQL
- **UI Libraries:** Tailwind CSS, Radix UI, Material UI, Ant Design, Bootstrap, Framer Motion
- **Testing:** Jest, React Testing Library, React Profiler
- **Build Tools:** Webpack, Babel, Vite, NPM
- **Deployment & DevOps:** Vercel, Netlify, PM2, Docker, CI/CD
- **AI Assisted Development:** Cursor, ChatGPT, Claude, Prompt Engineering, AI-assisted debugging, AI-assisted code review
- **Other Tools:** GIT, Pull Requests, Code Reviews, GitHub, Bitbucket, Figma, Strapi CMS, Postman

PROFESSIONAL EXPERIENCE

3Embed Software Technologies Pvt Ltd (Appscrip)

Bangalore, Karnataka

Software Developer

Aug 2024 - Present

- Developed and maintained scalable applications, collaborating with cross-functional teams to deliver customer-facing features from design through production.
- Built reusable components, shared utilities, and scalable UI patterns while integrating **100+** internal and third-party REST APIs using secure implementation practices.
- Improved application performance by **20–30%** through code refactoring, lazy loading, and rendering optimizations, while integrating payment, authentication, real-time communication, and CMS services.
- Participated in Agile development, code reviews, debugging, production support, and Git-based release workflows to ensure high-quality software delivery.
- Leveraged AI-assisted development tools to improve engineering productivity, debugging efficiency, and overall code quality.

PROJECTS

Commercial Employer & Worker Portal [🔗 Link](#)

Next JS · React JS · MQTT · Redux · Strapi CMS · Firebase · Bitbucket

- Led the end-to-end frontend development of a multi-role SaaS platform for workers and employers, delivering responsive and scalable user experiences from requirement analysis to production deployment.
- Architected reusable UI components, custom hooks, higher-order components (HOCs), shared utility functions, and common styling systems, reducing duplicate code by approximately **30%** and improving maintainability.
- Built complex multi-step workflows including authentication, profile management, job posting, worker onboarding, application tracking, and form validation with optimized state management.
- Integrated **100+ internal and third-party REST APIs**, implementing secure authentication, middleware-based request handling, and environment-driven configuration for sensitive credentials.
- Developed SEO-optimized landing pages using Next.js, improving organic search visibility and increasing website traffic by **25–30%**.
- Collaborated closely with Product, Design, QA, and Backend teams to deliver production-ready features using Agile development practices, Git workflows, code reviews, and CI/CD pipelines.

Care Connect — Healthcare Booking Platform [🔗 Link](#)

React JS · TypeScript · Node.js · Express.js · MongoDB · Firebase · MQTT · Stripe · Google Maps

- Developed a full-stack healthcare platform by building responsive React interfaces and Node.js/Express REST APIs for appointment booking, provider management, and user workflows.
- Designed secure backend services with authentication, request validation, and database operations, integrating MongoDB, Firebase, and third-party APIs for scalable application functionality.
- Built real-time features using MQTT and Firebase Cloud Messaging (FCM) to deliver live appointment updates, notifications, and location tracking.
- Integrated Stripe payments, Google Maps, and Typesense search to provide secure transactions, location-aware provider discovery, and fast, relevance-ranked search experiences.
- Optimized frontend performance using TanStack Query for API caching, background synchronization, and efficient server-state management, improving responsiveness, and reducing unnecessary network requests.
- Collaborated across the full development lifecycle, including API design, frontend implementation, debugging, testing, and deployment, ensuring maintainable and production-ready solutions.

AI Developer Productivity & Task Automation Tool

React · TypeScript · OpenAI SDK · Bitbucket · GitHub

- Developed an AI-powered engineering productivity platform that automatically analyzes commits, detects repositories, generated AI-assisted effort estimates, and generates structured progress reports.
- Implemented AI-driven task summarization and developer activity tracking to reduce manual reporting effort by over 70%.
- Leveraged LLM-assisted workflows and prompt engineering techniques to improve sprint visibility and engineering productivity.

EDUCATION

Gujarat Technological University, Surat, Gujarat

BE Computer Engineering, CGPA: 8.00

2020-2024
